SUMMARY

Group SDE II with ~7 years of experience building scalable backend APIs, microservices, and distributed systems in Java/Spring Boot and Node.js. Architect of Network Price Manager, a multi-tenant pricing platform serving 80 tenants through 9 client systems on Kafka, Redis, PostgreSQL, and Elasticsearch. B.Tech (Hons), IIT Kharagpur.

WORK EXPERIENCE

DP World, Bengaluru, India — **July 2021 – Present**

Awards: Hackathon Winner | DP World Champion Award | DP World Principle Award

Group SDE II *(Promoted)* — **October 2023 – Present**

Network Price Manager (NPM) – Java / Spring Boot / Node.js / PostgreSQL / Redis / Kafka

- Architected Network Price Manager (NPM), a multi-tenant centralised enterprise pricing platform managing millions of contractual, tariff, and spot rates across global multi-modal logistics networks, serving 80 tenants through 9 client systems and 1,000+ concurrent users.
- Split NPM into two microservices: a Java/Spring Boot core owning the write path (rates, contracts, vendor integration) and a Node.js offer engine owning the read path, with stateless workers fed by Kafka / Event Grid.

Distributed Systems & Event-Driven Architecture – Java / Spring WebFlux / Kafka / New Relic

- Built a unified Platform Offers API: one horizontal API for all client systems with HTTP, SSE, and event-driven responses, per-client deduplication and rate-limiting, SLA-based offer expiry, and data-level BUY/SELL access control.
- Integrated a Kafka channel with a transactional outbox for guaranteed, reliable async offer delivery.
- Implemented end-to-end distributed tracing across HTTP, Kafka, and worker-pool IPC boundaries, including a WebClient filter that fixed context loss on reactive thread hops, with New Relic dashboards on custom offer events.

Performance, Scalability & Data – Java / Node.js / Redis / PostgreSQL / Elasticsearch

- Reduced offer generation latency by ~40% through streaming-based computation and Redis caching of frequently accessed pricing and tenant configuration data on the hot path.
- Engineered a high-throughput asynchronous ingestion pipeline processing 2M+ pricing records per ingestion cycle with sub-5-minute turnaround through parallel processing, validation, and optimised batch persistence.
- Optimised PostgreSQL data models, indexing strategies, and query execution paths, achieving sub-500ms response times across million-record datasets under high concurrent workloads.
- Introduced Elasticsearch as a read-optimized mirror of Postgres with zero-downtime reindexing via alias swaps and real-time PG→ES sync, cutting rate-listing latency on large multi-tenant datasets.
- Designed AI-assisted pricing validation services using LLM APIs to identify anomalous rate configurations.

Leadership & Collaboration

- Led and mentored a 15-member engineering team on technical design, coding standards, and delivery.
- Introduced document-driven development practices, achieving over 90% unit test coverage and improved consistency.
- Winner of DP World Hackathon **(1st place out of 52 teams)** with an AI-powered logistics quoting solution.

SDE1 — **July 2021 – October 2023**

Software Engineer | KPIT Technology, India — **Aug 2019 – July 2021**

Award: Town Hall Kudos Award

Over-the-Air Updates (OTA) – C / C++ / Python / React.js

- Facilitated OTA updates and remote diagnostics for automotive companies like **Jaguar Land Rover, PSA, Volkswagen**, implementing **UDS/DoIP** protocols in **C/C++**.
- Wrote a **Flask** backend and **Cython** wrapper exposing a C++ automotive diagnostic system over REST APIs.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, C++
Backend: Spring Boot, Spring, Spring WebFlux, Hibernate, Node.js, Express.js, RESTful APIs, Microservices
Databases & Search: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Flyway
Messaging & Workflow: Kafka, Azure Event Grid, Temporal, Server-Sent Events (SSE)
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Azure Kubernetes Service (AKS), Azure DevOps, CI/CD, Git
Architecture: Distributed Systems, Event-Driven Architecture, High Availability, Scalability, Design Patterns
AI / LLM: LLM APIs, RAG, Embeddings, Vector Search (Qdrant), MCP Servers, Claude Code
Observability & Practices: New Relic, SonarQube, Team Leadership, Mentoring, Agile / Scrum

EDUCATION

B.Tech (Honours) | Indian Institute of Technology (IIT) Kharagpur — **2015 – 2019**
CGPA: 7.5
